

You are warmly invited to attend a public exhibition to find out more about our proposal for the Green Lane Eco Park to be located on industrial land off Green Lane, Salford.

The Event

Sky Properties are proposing to build a new resource recovery facility to recycle and recover energy from local business waste on industrial land off Green Lane, Salford.

As part of the development, Sky Properties has chosen Salford-based Energos Limited to provide its unique gasification technology.

We intend to submit our plans shortly, but before we do we are hosting a public exhibition to give you the opportunity to find out more about the proposals, give us your views and discuss them directly with our team.

What is proposed?

The proposed development is aimed at contributing to sustainable waste management in the Greater Manchester area by treating and managing around 240,000 tonnes per year of local business waste through a combination of facilities:

- A Materials Recovery Facility (MRF), with a capacity of around 100,000 tonnes per year, to sort and extract dry recyclable materials such as paper, cardboard, glass and cans ready for reprocessing into new products
- An Anaerobic Digestion plant (AD), with a capacity of around 60,000 tonnes per year, to process food and other biodegradable waste to generate renewable energy
- An Energos Gasification plant, with a capacity of around 80,000 tonnes per year, to convert residual, non-recyclable waste into renewable energy in the form of heat and power

Why do we need it?

There are numerous economic, financial and environmental reasons at the national, regional and local level as to why this facility is required:

- Landfill is becoming a very expensive option and tough EU and UK targets mean as much waste as possible must be diverted from landfill
- It is essential to recycle as many valuable resources as possible, and where they can't be recycled, to recover energy from them
- The UK must meet renewable energy targets, and energy generated from waste can help the local area to become more self-sufficient in producing its own energy
- Managing waste in this way will support local businesses and provide direct employment for up to 50 people once operational and many more indirectly, and the local community will benefit from a multi-million pound investment

The exhibition will be held at:

Monton House Hotel
116 Monton Road
Monton, Manchester
M30 9HG

2pm – 7pm

Thursday 3rd December 2009

2pm – 6pm

Saturday 5th December 2009

10am – 2pm

Sunday 6th December 2009
